

**SUPPORT
UNIT
AUSTRIA**

www.support-unit.at
office@support-unit.at

Technical and organizational concept

The equipment of the Support Unit Austria is based on and part of the System used by the state of Vorarlberg/Austria. Due to the reason that the state of Vorarlberg is asked to hold out equipment and spares to react in major disaster events, the goal is to realise synergies which are used to operate the **Support Unit Austria**:

our Goal:

**Communication during national
and international disaster relief**

The **Support Unit Austria** offers state-of-the-art communication equipment to all members of a relief units during national and international deployment.

The Team:

The **Team** of the **Support Unit Austria** is made up of IT- and communication experts of all relief and rescue organisations and from experts of the state of Vorarlberg itself.

365 days a year the members of the team are on standby 24/7 to get active on relief operations (national and international)

All **Members** of the **Support Unit Austria** are specially trained and own the needed know how to operate such a system.

Alerting

The alerting of the **Support Unit Austria** is arranged by the „Rettungs- und Feuerwehr Leitstelle Vorarlberg (RFL).

The request for the **Support Unit Austria** to operate in the state of Vorarlberg can be expressed by the federal state government and any other rescue organisation.

For the assignment in any other state within the borders of Austria the request is expressed through the

“Landeswarnzentrale Vorarlberg” (LWZ = LEMA)

For assignments outside the borders of Austria the federal ministry of the interior is responsible for the coordination and the alerting of the unit.
